Cadillac Products Packaging Company

Engineered Solutions

Dairy

Cadillac Products Packaging Company is an innovative Dairy flexible packaging company. As a strategic market segment, Dairy applications are a large part of our development efforts. Our wide range of internal film-making and converting capabilities allow CPPC to offer a breadth of products unmatched in our industry.

Multilayer Coextrusions

Our current capabilities include coex films that are engineered for specific performance criteria. The current product offering includes films used in a variety of end-uses, such as: cultured dairy lidding; cream cheese bar wrap; aseptic, barrier laminations and films.

Easy Peel Films

CPPC uses a proprietary blend of resins that can be combined in a barrier film and/or printed lamination. Our current product offerings for Easy Peel films and laminations include cultured dairy lidding, barrier-bulk cheese and shelf-stable pudding.

Foil Laminations

In some Dairy applications, foil-based barrier is the only material that will meet the performance requirements. We have the knowledge and capability to provide many foil-based products for a myriad of applications. Our current product offerings for foil laminations include shelf-stable pudding, cream cheese bar-wrap, cultured dairy lidding, bulk and work-in-process applications.

Dairy
