

Flexographic Printing

Cadillac Products Packaging Company Engineered Solutions

Flexographic Printing

Flexographic Printing

CPPC is very proud of its technical expertise in high resolution Flexographic printing. We are able to provide our customers with high quality printing, of difficult image compositions that were previously only associated with more expensive printing methods.

Our press operators and partners are skilled in the latest software and hardware used in art preparation and pre-press. We utilize modern technology in printing press registration and control systems, video press monitoring systems and advanced ink process and mechanical control methods.

Our technical leadership in the Flexographic arena is demonstrated in the way we handle subtle tones as well as fine print screen values to give our customers sharper and cleaner printing results.

- Up to 8 colors process and line on film or paper
- Surface or reverse print
- Webs up to 60" wide
